

User Guide for Sangam Chatbot:

The chatbot has been built to be very intuitive and doesn't need complex activation phrases (***Abra Kadabra!!!!***) to work. However, this document is written to provide some example scenarios (in case if a user needs it).

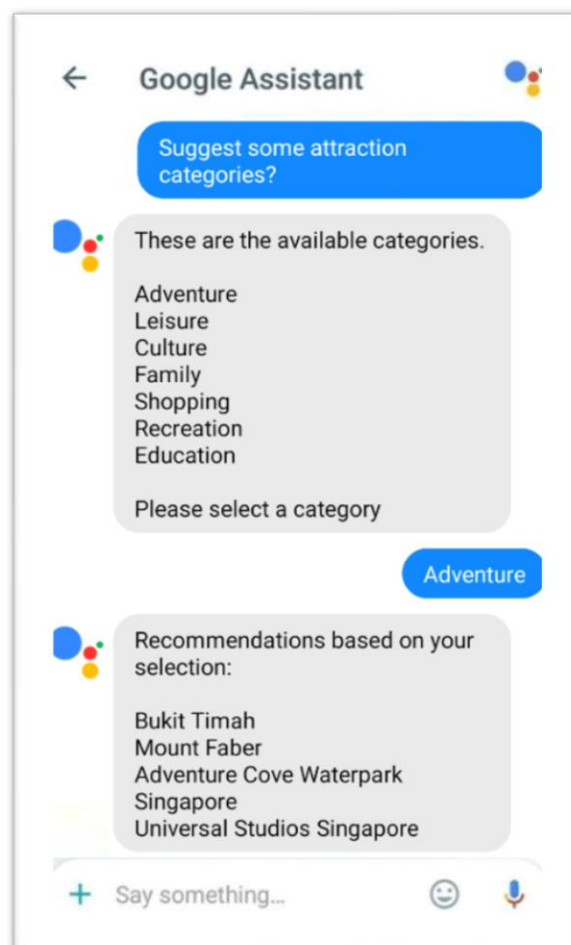

Sangam is a travel assistant chatbot built to guide tourists and suggest itinerary interactively. It handles the following scenarios

1. Recommend places based on categories of interest
2. Provide details of attractions
3. Generate a one-day itinerary
4. Suggest upcoming events
5. Suggest tour packages

We will examine each case with examples

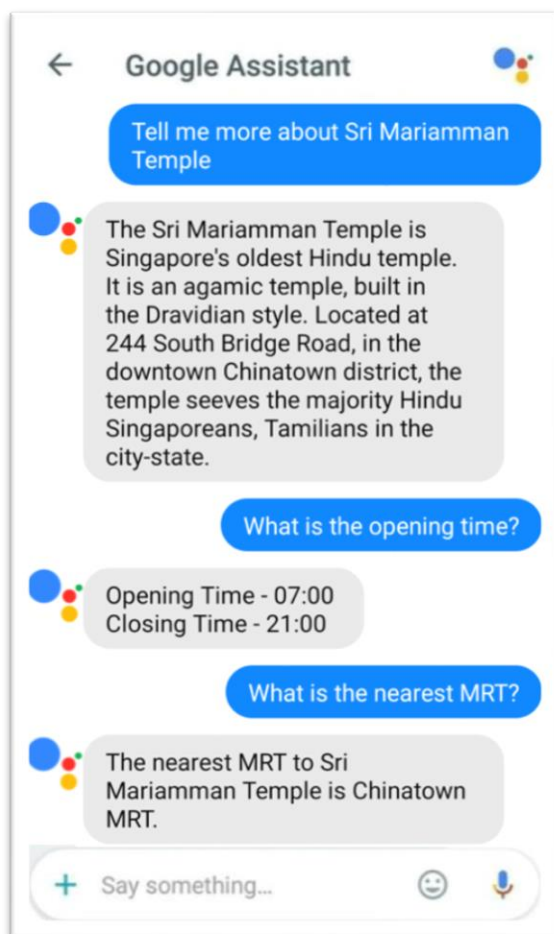

Recommend places based on categories of interest

The conversation in this case can go as below

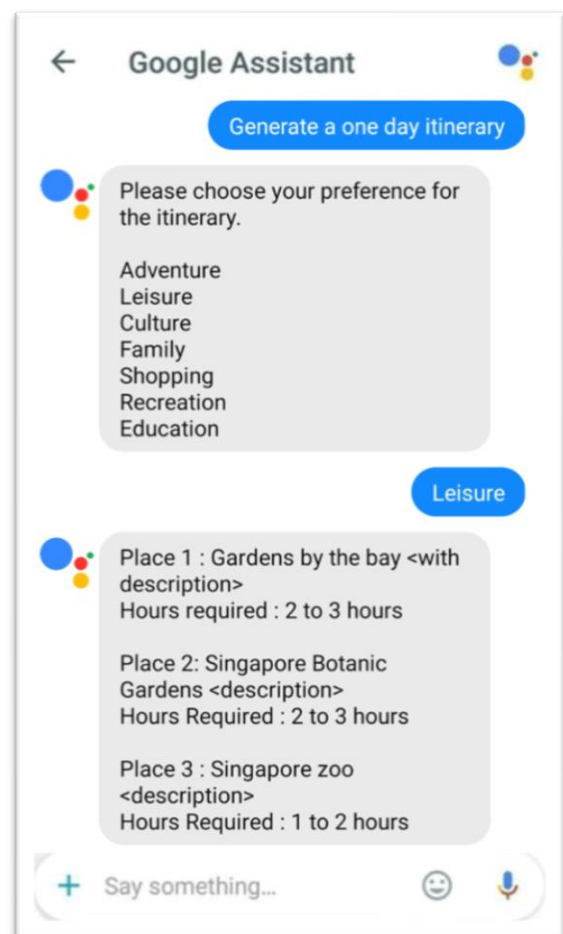

Provide details of attractions:

From this point the user may ask specific details of the places as below

Generate a one-day itinerary:

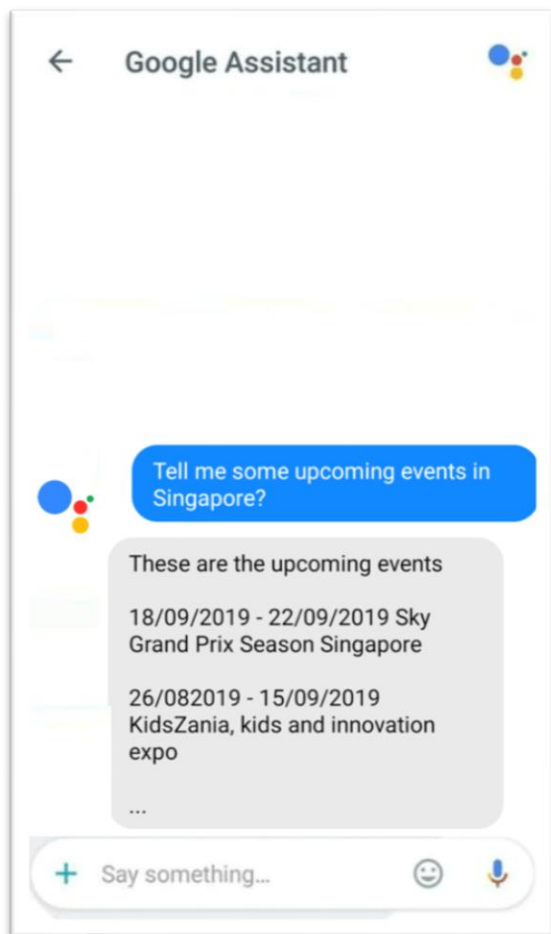

The user may ask the chatbot to generate a one day itinerary which is shown below

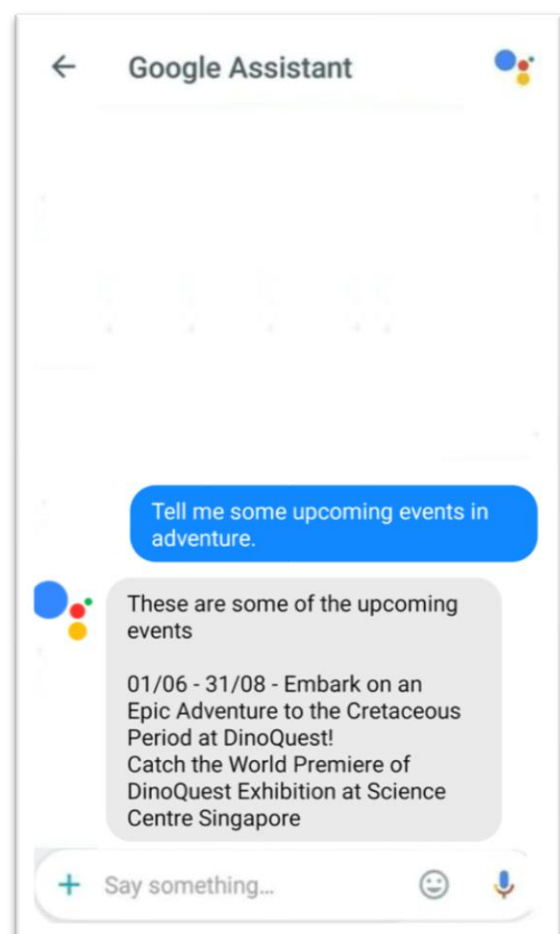

Suggest upcoming events :

The user may ask the chatbot to suggest upcoming events in Singapore. The question can be general or specific

General Example:

Specific Example:

Suggest tour packages:

The user may ask for available tour packages to explore.
